COURSEWORK

CS50: Introduction to Computer Science

Self-paced online course (in progress) — covering C, Python, SQL and web development fundamentals.

Afzal

Aspiring Software Engineer & Entrepreneur

PROFILE

Gap-year student from Uzbekistan preparing to study Computer Science abroad. Builds real products — mobile apps and bots — focused on discipline and behavior change, with hands-on experience across the full stack: mobile front ends, backend data models, and shipping to real users.

PROJECTS

TheAnchor — Featured Project

[React Native](#) · [Expo](#) · [TypeScript](#) · [Supabase](#) · [PostgreSQL](#)

- Designed a cross-platform habit app around motivation recovery instead of streak-based punishment, targeting the days 3–14 motivation-decay window.
- Built a consistency score that dips and recovers rather than resetting to zero, plus adaptive difficulty and identity-based framing.
- Implemented an accountability-duos system and a full backend on Supabase / PostgreSQL.

IELTS Prep Telegram Bot

[Python](#) · [Telegram Bot API](#) · [PostgreSQL](#)

- Built and shipped a Telegram bot delivering structured daily IELTS practice — vocabulary, writing prompts and listening drills.
- Added per-student progress tracking directly inside the chat interface, with zero-install distribution.
